Seismo-Watch

Jan. 31-Feb. 6, 2008

By Charles P. Watson, Prof. Geologist No. 7818

Magnitude M>1	1	2	3+	Total
This Week	54	11	3	68*
Previous week	54	11	1	66

▼ Earthquake activity remained at the 60-quake-per-week level for the fifth straight week. This week's total was the highest during that time.

▼ For the first time in more than two months, three M 3.0s were recorded. Five M 3.0s have occurred in the last four weeks. Only one was recorded in the previous four-week period.

▼ The most notable earthquake measured M 3.0 and occurred Wednesday night east of San Jose near Lick Observatory. It was part of an increase in aftershock activity from the October 30 Calaveras Fault M 5.4 earthquake. It was accompanied by a few other quake registering nearly as large, all of which were locally felt.

▼ The largest earthquake measured M 3.6 and occurred southeast of Coalinga at the Kettleman Hills. To the west and on the coast in the of San Simeon aftershock zone was a quake measuring M 3.1. It was the fourth M 3.0 event here in as many weeks.

▼ The largest of seven quakes southwest of San Francisco at Daly City measured M 1.7.
