# Seismo-Watch

April 10-16, 2008

By Charles P. Watson, Prof. Geologist No. 7818

Magnitude M>1	1	2	3+	Total
<b>This Week</b>	57	13	0	70*
Previous week	55	17	0	72

▼ Earthquake activity remained about the same as the previous week, posting another tally at the 70 quake-per-week mark.

▼ The intensity of seismicity dropped slightly, producing 13 quakes registering M 2.0 or stronger - four less than last week.

▼ For the second week in a row, no activity registered in the M 3.0 range. It was the first back-to-back week in two months.

▼ A resurgence of seismicity occurred along the creeping segment of the San Andreas Fault between San Juan Bautista and San Benito. Twenty-eight quakes were recorded, including eight in the M 2.0 range. Driving the action was a sequence just south of San Juan Bautista where five quakes measured in the M 2.0 range. The two largest registered M 2.7. Felt?

▼ Twelve quakes were recorded along the Calaveras Fault east of San Jose. The strongest, a M 2.4, was locally felt.

▼ A M 2.3 hit the Hayward Fault at Berkeley and a M 2.6 triggered in the mountains west of Bradley.

## April is EQ Preparedness Month

This year really do something to improve your earthquake safety.
